PROFESSIONAL SUMMARY

Full-Stack Developer with a B.S. in Computer Science and advanced training in AI-native software engineering. Proficient in building secure, scalable full-stack applications using React, Node.js, and PostgreSQL. Adept at utilizing AI-assisted workflows to speed up feature implementation and optimize backend architecture. Seeking a Full-Stack Engineer role where I can leverage these modern development workflows to build impactful, user-centered products.

EXPERIENCE

White Glove Community Care | Paraprofessional

Dec 2025 – Present

A community care agency providing specialized educational and behavioral support services to students in need.

Brooklyn, NY

- Delivered individualized academic, emotional, and behavioral support to a special needs student, adapting daily learning plans to foster independence and maximize classroom engagement.
- Implemented structured behavioral modification strategies and crisis-de-escalation techniques across the classroom to maintain a safe, productive learning environment.
- Collaborated closely with educators, parents, and school leadership to track student progress, align on IEP (Individualized Education Program) goals, and ensure consistent plan execution.

Spectrum | Outside Sales Representative

Apr 2025 – Dec 2025

A major telecommunications provider delivering internet, mobile, and digital services nationwide.

Long Island City, NY

- Managed an assigned territory to drive the full sales lifecycle, converting door-to-door outreach into closed residential internet and mobile service bundles.
- Conducted fast-paced client needs assessments, leveraging strong communication and problem-solving skills to troubleshoot objections and cross-sell products.
- Utilized CRM systems and territory management software to systematically track pipeline data, document customer interactions, and monitor sales metrics.

TECHNICAL PROJECTS

VentureFlow | AI Matchmaker & Funding Predictor

July, 2026

A full-stack, dual-sided platform matching startup founders with real investors using live funding data and transparent scoring.

- Built VentureFlow, a full-stack dual-sided platform matching startup founders with real investors, using Next.js, TypeScript, and Supabase (PostgreSQL, Auth, and Row-Level Security) for secure, role-gated access.
- Designed a relational schema and wrote PostgreSQL functions to power real-time analytics and a transparent, data-driven funding-likelihood scoring engine — every score traceable to real historical deal data, not a black-box model.
- Partnered with Claude (Anthropic) throughout the build to accelerate feature development, debug complex Supabase/RLS and Next.js Server Component issues, and iteratively refine the data model and matching logic.

Librio | Frontend Goodreads Evolution and Book Tracker

June, 2026

A responsive React bookshelf platform featuring real-time search, column sorting, and custom shelf tracking.

- Built a client-side React and TypeScript web application featuring a modern, highly responsive tabular layout designed to eliminate visual clutter and fatigue.
- Implemented robust in-memory search filters and column sorting algorithms to enable readers to reorder or subset library rows instantly with zero network latency.
- Integrated the Open Library REST API to support dynamic book addition, implementing status drop-downs for shelf transitions and an adaptive light/dark mode for improved accessibility.

JobSync | Full-Stack Job Tracking Platform

April, 2026

A full-stack job tracking platform featuring secure authentication, CRUD functionality, and a responsive React UI.

- Built a scalable full-stack web application featuring a responsive React UI with reusable components, integrated with a secure JWT-authenticated Node.js/Express backend.

- Designed and deployed a robust RESTful API with full CRUD functionality, utilizing PostgreSQL and Prisma ORM for scalable data persistence and advanced multi-field search filtering.
- Leveraged next-generation AI development tools and prompt engineering to accelerate feature implementation, debug backend/API defects, and rapidly iterate on application architecture.

EDUCATION

Pursuit | AI-Native Program (Inaugural Cohort)

Dec. 2025 – Present

600+ hour, 7-month intensive program focused on building complex products end-to-end with the latest AI tools.

Long Island City, NY

- In the process of shipping 10+ end-to-end builds across the program — progressing from solo web apps with HTML/CSS and REST APIs to multi-person team PRs on real open-source codebases — each cycle delivering a demo-ready product within 2 weeks
- Wrote 8+ full PRDs, conducted product teardowns, built industry-specific features informed by business model research, and presented decisions to industry partners, Pursuit staff, and the wider Builder community
- Collaborated in team-based engineering sprints, participated in code reviews, agile methodologies, and cross-functional design sessions.

Western Governors University / CUNY

Bachelor of Science in Computer Science

Hack Reactor

Advanced Software Engineering Certificate

- Completed a 12-week, 500+ hour immersive software engineering program focused on advanced JavaScript and Python, computer science fundamentals, and full-stack application architecture.

SKILLS

Languages: JavaScript, Python, SQL

Frontend: React, HTML/CSS, Tailwind CSS

Backend: Node.js, Express, FastAPI

Databases: PostgreSQL, MongoDB, Prisma ORM, FastAPI

Tools & AI: Git, GitHub, Docker, REST APIs, LLM APIs, Claude Code, Cursor, VS Code, Vite

Concepts: Full-Stack Development, Authentication, API Design, Debugging, Prompt Engineering, AI-Assisted Development

Strengths: Project Management, Communication, Adaptability, Problem Solving, Collaboration
